Brand Finance®

US 500 2017

The annual report on America's most valuable brands
March 2017

Foreword

David Haigh, CEO Brand Finance

What is the purpose of a strong brand; to attract customers, to build loyalty, to motivate staff? All true, but for a commercial brand at least, the first answer must always be "to make money." Huge investments are made in the design, launch and ongoing promotion of brands. Given their potential financial value, this makes sense. Unfortunately, most organizations fail to go beyond that, missing huge opportunities to effectively make use of what are often their most important assets. Monitoring of brand performance should be the next step, but is often sporadic. Where it does take place it frequently lacks financial rigor and is heavily reliant on qualitative measures poorly understood by non-marketers. As a result, marketing teams struggle to communicate the value of their work and boards then underestimate the significance of their brands to the business. Skeptical finance teams, unconvinced by what they perceive as marketing mumbo jumbo may fail to agree necessary investments. What marketing spend there is can end up poorly directed as marketers are left to operate with insufficient financial guidance or accountability. The end result can be a slow but

steady downward spiral of poor communication, wasted resources and a negative impact on the bottom line.

Brand Finance bridges the gap between the marketing and financial worlds. Our teams have experience across a wide range of disciplines from market research and visual identity to tax and accounting. We understand the importance of design, advertising and marketing, but we also believe that the ultimate and overriding purpose of brands is to make money. That is why we connect brands to the bottom line. By valuing brands, we provide a mutually intelligible language for marketers and finance teams. Marketers then have the ability to communicate the significance of what they do, and boards can use the information to chart a course that maximizes profits. Without knowing the precise, financial value of an asset, how can you know if you are maximizing your returns? If you are intending to license a brand, how can you know you are getting a fair price? If you are intending to sell, how do you know what the right time is? How do you decide which brands to discontinue, whether to rebrand, and how to arrange your brand architecture? Brand Finance has conducted thousands of brand and branded business valuations to help answer these questions.

Brand Finance's recently conducted share price study revealed the compelling link between strong brands and stock market performance. It was found that investing in the most highly branded companies would lead to a return almost double that of the average for the S&P 500 as a whole. Acknowledging and managing a company's intangible assets taps into the hidden value that lies within it. The following report is a first step to understanding more about brands, how to value them and how to use that information to benefit the business. The team and I look forward to continuing the conversation with you.

Branded Business Value

A brand should be viewed in the context of the business in which it operates. For this reason, Brand Finance always conducts a Branded Business Valuation as part of any brand valuation. Where a company has a purely monobranded architecture, the business value is the same as the overall company value or "enterprise value."

In the more usual situation where a company owns multiple brands, business value refers to the value of the assets and revenue stream of the business line attached to that brand specifically. We evaluate the full brand value chain in order to understand the links between marketing investment, brand tracking data, stakeholder behavior and business value to maximize the returns business owners can obtain from their brands.

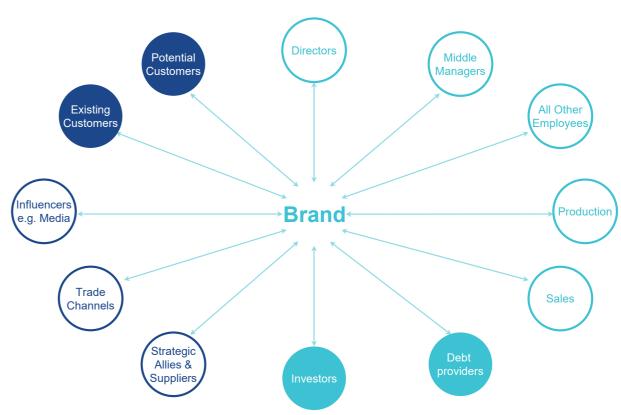

Brand Contribution

The brand values contained in our rankings are those of the potentially transferable brand asset only, but for marketers and managers alike, an assessment of overall brand contribution to a business provides powerful insights to help optimize performance.

Brand Contribution represents the overall uplift in shareholder value that the business derives from owning the brand rather than operating a generic brand.

Brands affect a variety of stakeholders, not just customers but also staff, strategic partners, regulators, investors and more, having a significant impact on financial value beyond what can be bought or sold in a transaction.

Effect of a Brand on Stakeholders

Brand Value

In the very broadest sense, a brand is the focus for all the expectations and opinions held by customers, staff and other stakeholders about an organization and its products and services. However, when looking at brands as business assets that can be bought, sold and licensed, a more technical definition is required.

Brand Finance helped to craft the internationally recognised standard on Brand Valuation, ISO 10668. That defines a brand as "a marketing-related intangible asset including, but not limited to, names, terms, signs, symbols, logos and designs, or a combination of these, intended to identify goods, services or entities, or a combination of these, creating distinctive images and associations in the minds of stakeholders, thereby generating economic benefits/value."

Brand Strength

Brand Strength is the part of our analysis most directly and easily influenced by those responsible for marketing and brand management. In order to determine the strength of a brand we have developed the Brand Strength Index (BSI). We analyze marketing investment, brand equity (the goodwill accumulated with customers, staff and other stakeholders) and finally the impact of those on business performance.

Following this analysis, each brand is assigned a BSI score out of 100, which is fed into the brand value calculation. Based on the score, each brand in the rankings is assigned a rating between AAA+ and D in a format similar to a credit rating. AAA+ brands are exceptionally strong and well managed while a failing brand would be assigned a D grade.

4. Brand Finance US 500 March 2017 5.

Methodology

Ranking Valuation Methodology

Brand Finance calculates the values of the brands in the rankings using the 'Royalty Relief approach'. This approach involves estimating the likely future sales that are attributable to a brand and calculating a royalty rate that would be charged for the use of the brand, i.e. what the owner would have to pay for the use of the brand—assuming it were not already owned.

The steps in this process are as follows:

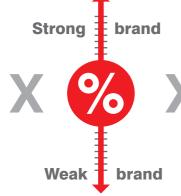

1 Calculate brand strength on a scale of 0 to 100 based on a number of attributes such as emotional connection, financial performance and sustainability, among others. This score is known as the Brand Strength Index, and is calculated using brand data from the BrandAsset® Valuator database, the world's largest database of brands, which measures brand equity, consideration and emotional imagery attributes to assess brand personality in a category agnostic manner.

Brand strenath expressed as a BSI score out of 100.

US 500

America's brands continue to reach new heights. Ten years on from the financial crisis, which saw both business and brand values plunge, the vast majority of America's most valuable brands are now going from strength to strength. The total value of America's top 500 brands now exceeds \$3 trillion dollars, having increased from \$2.82 trillion in 2016 to \$3.14 trillion this year. President Trump, an experienced brand builder himself, for now appears to have fostered a conducive environment for continued brand value growth. However his longer term approach and objectives remain hard to pin down and 2017 could deliver as many if not more shocks than 2016.

2017 has already delivered one major brand shock. Apple has seen nearly \$40 billion wiped off its brand value, meaning that for the first time in over five years, America (and the world) has a new most valuable brand. Apple was once a paragon of branding excellence. It has a meticulously constructed, sleek and innovative visual identity that runs consistently through all its products, services and retail sites. Its monobrand structure created marketing efficiencies and helped to cement its logo as an icon of the 21st century. Reliability, user-friendly interfaces, knowledgeable staff and, most importantly, its transformative technology meant that the brand fulfilled its promises. Loyalty and advocacy reached cultish proportions with fans waiting days outside Apple stores for the latest release.

However, Apple's evangelists are beginning to lose their faith. The snaking queues of early adopters have shrunk almost to the point of invisibility. Apple has failed to maintain its

technological advantage and has repeatedly disillusioned its advocates with tweaks when material changes were expected. Put simply, Apple has over-exploited the goodwill of its customers. It has failed to generate significant revenues from newer products such as the Apple Watch and cannot demonstrate that genuinely innovative technologies desired by consumers are in the pipeline.

Its brand has lost its luster and must now compete on an increasingly level playing field, not just with traditional rival Samsung, but a slew of Chinese brands such as Huawei and OnePlus in the smartphone market, Apple's key source of profitability. Brand Finance's analysts had remained bullish about Apple's potential to recover its lost momentum, but the rot has now truly set in, with brand value falling 27% since early 2016 to US\$107 billion, which sees it lose

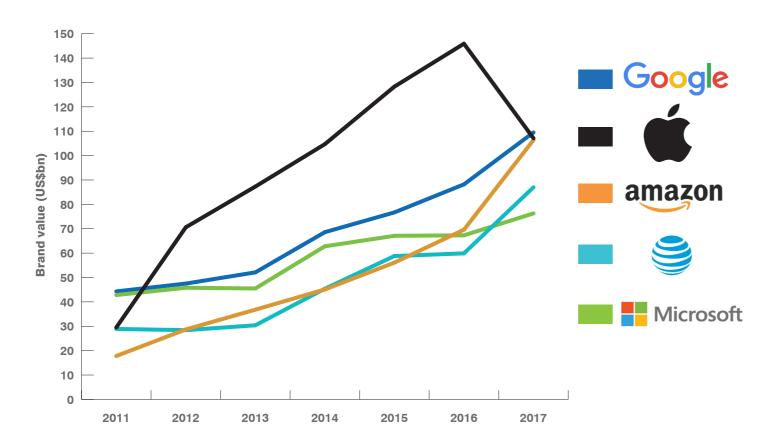

its status as the world's most valuable brand.

Apple's loss has been Google's gain. Six years after it last held the title in 2011, Google is now the world's most valuable brand with a value of US\$109 billion. It is perhaps fitting that the brand which enables the world's biggest brands reach their customers and build their own brand equity (through search and advertising respectively) has itself become the world's most valuable. Google remains largely unchallenged in its core search business, which is the mainstay of its advertising income. Ad revenues were up 20% in 2016, despite a fall in cost per click, as ad budgets are increasingly directed online.

However, the recent controversy over Google's placement of customers' ads alongside undesirable content illustrates that even companies with apparently dominant market

8. Brand Finance US 500 March 2017 9.

Brand Value Over Time

positions must be conscious of the risks to their most valuable asset, their brand.

Amazon is growing strongly (brand value is up 53% year on year) as it continues to both reshape the retail market and to capture an ever larger share of it. Amazon's grocery service began operating overseas for the first time this year and the company has stated it will create 100,000 jobs in the US over the next 18 months. Such confidence suggests that, with a brand value only fractionally behind Apple and Google already, Amazon could easily become the most valuable brand in the US and the rest of the world in 2018, provided it can establish a more emotional connection with consumers.

Facebook continues to climb the ranks following 82% brand value growth, but at a global level, it has been outdone by China's biggest tech

brands. Alibaba, WeChat and Tencent have grown by 94%, 103% and 124% respectively. WeChat has over 850 million users and despite being largely confined to its domestic market, could soon start to challenge Facebook for user numbers. WeChat offers a more extensive range of services, than any comparable brand, from mobile payments to video games and text messaging to video sharing. As a result it is far more embedded in the life of the average user, even replacing work emails for many Chinese, opening the door to brand extension and further growth.

Chinese brands threaten US ones in the banking sector too. For the first time, China's biggest banking brands have a higher cumulative brand value than America's. In addition, while Wells Fargo remains America's most valuable banking brand, it has lost its number 1 position at the

US Bank Brands No Longer the World's Most Valuable

All data is from the Brand Finance Banking 500 studies

global level to China's ICBC. Wells Fargo fell 6% after a turbulent year for the brand. Damage to its reputation has seen its brand significantly underperform this year. The bank has endured a tough year and has been rocked by scandals. lawsuits and resignations. The company has suffered due to the recent scandal where over 2 million accounts and credit cards were opened/ applied for without customer knowledge or consent. Its brand value to market capitalization ratio is just 14% in contrast to ICBC's 20%. Although its brand equity will take a while to repair, this particularly low figure suggests that a slight rebound could occur and that Wells Fargo may have the potential to recapture the top spot in 2018 or 2019.

AT&T saw its brand value grow 45% this year to \$97 billion, overtaking Verizon as the most valuable telecoms brand. Its growth in both brand

value and market share have been underpinned by acquisitions in South America and Mexico in addition to its 2015 takeover of DirecTV. Brand strategy has played a role too. Following the acquisition of DirecTV, it was quick to create an 'endorsed brand', inserting its logo and "Now part of the AT&T family" beneath the DirectTV wordmark. It has since moved a step closer to a unified branding, with the AT&T master logo enlarged and the DirecTV wordmark reduced. In addition to creating marketing efficiencies, this channels revenues to the AT&T brand, enhancing value.

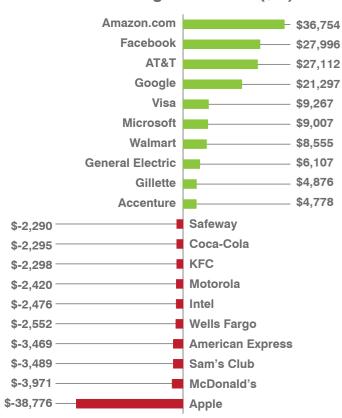

In 2007, Coca-Cola's brand value was \$43.1bn, making it the most valuable brand in America and the wider world. Today, however, its brand value stands at just \$31.8bn, putting it 16th in the US and 27th internationally. Increasing concerns over the links between carbonated drinks and obesity

10. Brand Finance US 500 March 2017

Brand Finance US 500 March 2017

11.

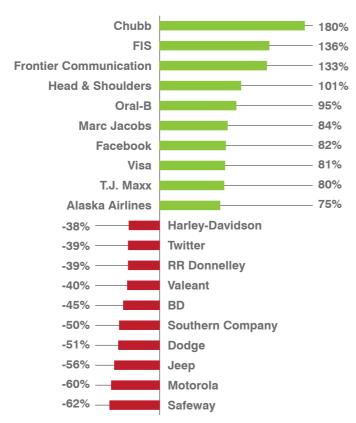

Brand Value Change 2016-2017 (\$m)

have begun to undermine what the Coca-Cola brand has represented for over one hundred years. Over the last few years, The Coca-Cola Company has rolled out a much publicized initiative to consolidate Coke, Diet Coke, Coke Zero and Coke Life under one master brand. Unfortunately, however, it has failed to address changing consumer tastes in a substantive way. As alternatives marketed as healthier or more natural have fragmented the soft drinks market, Coca-Cola's brand value has declined. Pepsi is similarly suffering, falling 4% to \$18.3 billion.

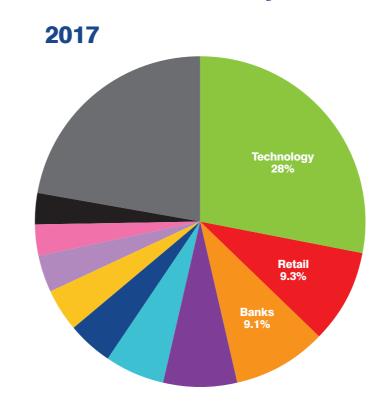

The same trend is evident in the fast food industry. The brand values of McDonald's, KFC, Taco Bell, Pizza Hut, Subway, and Domino's have all fallen due to heavy competition in an increasingly fragmented market, with healthier challenger brands offering greater choice for consumers. Panera Bread, regularly lauded as

Brand Value Change 2016-2017 (%)

Total Brand Value by Sector

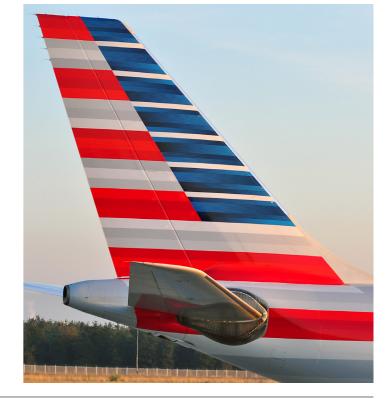

KEY

Color	Sector	Total Brand Value (\$bn)	%

the healthiest fast food chain, is a beneficiary of this trend for slightly healthier, fast-casual options. Panera's communications and advertising draw heavily upon this theme, stressing the importance of 'clean,' natural food as the foundation of a full and healthy life. The brand is going from strength to strength, with its Brand Index Score increasing from 71 in 2025 to 76 in 2016 and 80 this year. Brand value is up 32% to \$1.9 billion.

2017 heralds huge success for America's airline brands. Emirates had been the world's most valuable airline brand for the last five years. However in 2016, half-year profits plunged 75%. Local demand has faltered and a lower price has levelled the playing field for international rivals, leading to increased competition, driving down fares. Meanwhile the strength of the dollar has increased operating costs and also had a

negative FX impact on all non-US domiciled brands. As a consequence, Emirates' brand value is down 21% to US\$6.1 billion. In contrast, America's airlines have all soared in value. United, Delta and American have grown by 60%, 47% and 59%, respectively. All have overtaken Emirates, with American becoming the world's most valuable airline brand with a value of \$9.8 billion.

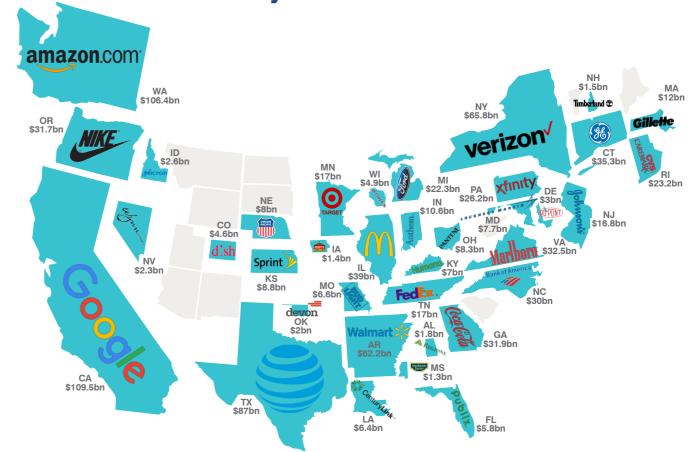

Boeing and Lockheed Martin have grown impressively in brand value, rising 17% and 32% respectively. President Trump's commitment to increase military spending and his apparent economic patriotism have improved forecasts, and American aerospace and defense brands in the US can expect to benefit in the near future.

Hilton is the world's most valuable hotel brand with a brand value of US\$8.4 billion, up 7% on 2016. Hilton remains one of the world's most

powerful hotel brands (rated AAA) and continues to engage in a variety of brand building initiatives. To maintain the brand's visibility in the face of changing technology, Hilton has recently agreed to allow TripAdvisor users to not only view Hilton accommodation and check prices, but also to book directly through the site. Meanwhile, recent CSR drives include partnerships with Global Sustainable Solutions and ORCA to reduce food waste and improve recycling, as well as a plan to fast track veterans into employment.

California remains America's most valuable state by brand value. Of the country's top 500 brands, 71 hail from the Golden State, with a total value of \$725 billion. New York is in second place, but despite have just one less brand in the top 500 than California, New York's total is significantly lower, at \$481 billion. The reason for this discrepancy is twofold.

Most Valuable Brands by State

Banking used to make up the largest share of America's total brand value. However since the financial crisis of 2008, banking brands have lost ground and appear to remain vulnerable to significant reputational risks. Finance comprises a large share of New York's total brand value. Therefore, New York has been disproportionately affected by the stalling values of financial services brands.

On the other hand, tech brands have gone from are in the ascendent, their average brand value growth rate of 21% outstripping all other industries. As the cradle of the global tech industry, California's total has risen rapidly too. There are 84 tech brands in the US 500 and California is home to 40 of them, including Google and Apple, both \$100 billion brands.

The increasing concentration of brand value in

tech explains Washington State's strong performance too. Washington has just 11 brands in the US 500 (16 states have more) yet as the home of tech titans Microsoft and Amazon, Washington ranks 4th with a total brand value of \$242 billion.

On the other hand, 3rd placed Texas has a much broader base of brand value. Its 48 brands in the US 500 have a total value of \$263 billion. Oil & Gas brands are of course well represented, including ExxonMobil and its portfolio of brands, however Texas is home to major brands from a wide range of sectors including AT&T (telecoms), Dell (tech), American Airlines and Whole Foods (retail). 5th placed Illinois is another state with a diverse array of brands. 1st amongst its 31 brands is McDonalds, which has had a challenging year dropping 9%, however many of Illinois' other brands are performing strongly with

*No brands from the remaining 13 states were large enough in brand value to feature in the US 500

Boeing up 17%, Accenture 38% and United Airlines up 60%.

Only a handful of states have seen their number one brand change this year. Google's defeat of Apple is perhaps the most striking case, though some other iconic brands have lost their local flagship status. KFC, for example, is no longer Kentucky's most valuable brand. It been affected by the general downturn among traditional, less healthy fast-food operators and has seen its brand value fall 27% to \$6.2 billion.

As if to illustrate the growing focus on health, Humana is Kentucky's new most valuable brand. The Health Insurance business' brand is now valued at \$7.1 billion supported by continued customer acquisition, revenue growth and improving brand strength (which has led to Humana's brand rating being upgraded to AA). Donald Trump and Paul Ryan's bill to dismantle the Affordable Care Act had the potential to cause significant disruption to many healthcare brands, so its recent defeat bodes well for the brand. Humana was the target of a takeover bid by Aetna in 2016, however the deal was blocked by the United States District Court, ensuring that the continued use of the Humana name and trademark are secure for now.

Meanwhile, Harley-Davidson has lost its position as Wisconsin's most valuable brand. In 2016 Harley was in the elite group of AAA+ rated brands and had a brand value of over \$5 billion. However, this value has dropped 38%, and Harley has been overtaken by both Fiserv and Kohl's. The latter now leads Wisconsin's 7 brands in the US 500 with a value of \$4.9 billion.

The number of states with brands in the country's top 500 has remained constant at 37; however Arizona has dropped out, to be replaced by Mississippi. The Magnolia state's Sanderson Farms makes its debut in the Brand Finance US 500 at 469th with a value of \$1.3bn.

26. Brand Finance US 500 March 2017 27.

Understand Your Brand's Value

A Brand Value Report provides a complete breakdown of the assumptions, data sources and calculations used to arrive at your brand's value. Each report includes expert recommendations for growing brand value to drive business performance and offers a cost-effective way to gain a better understanding of your position against competitors.

A full report includes the following sections which can also be purchased individually.

Brand Valuation Summary

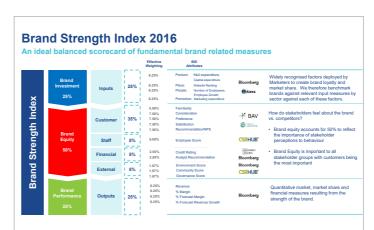

Overview of the brand valuation including executive summary, explanation of changes in brand value, and historic and peer group comparisons.

- + Internal understanding of brand
- + Brand value tracking
- + Competitor benchmarking
- + Historical brand value

Brand Strength Index

A breakdown of how the brand performed on various metrics of brand strength, benchmarked against competitor brands in a balanced scorecard framework.

- + Brand strength tracking
- + Brand strength analysis
- + Management KPI's
- + Competitor benchmarking

Royalty Rates

Analysis of competitor royalty rates, industry royalty rate ranges and margin analysis used to determine brand specific royalty rate.

- + Transfer pricing
- + Licensing/ franchising negotiation
- + International licensing
- + Competitor benchmarking

Cost of Capital

A breakdown of the cost of capital calculation, including risk free rates, brand debt risk premiums and the cost of equity through CAPM.

+ Independent view of cost of capital for internal valuations and project appraisal exercises

Trademark Audit

Analysis of the current level of protection for the brand's word marks and trademark iconography, highlighting areas where the marks are in need of protection.

- + Highlight unprotected marks
- + Spot potential infringement
- + Trademark registration strategy
