**DIGITAL IQ INDEX:**

# Sportswear

September 20, 2012

**SCOTT GALLOWAY**  
NYU Stern

# *The End of the Beginning*

Once peripheral, e-commerce, digital marketing, and mobile are moving to the core of sportswear brands' growth strategy and garnering more capital (financial and creative). Brands from Apple to Cartier to adidas and Converse share one strategy: increasing share of sales from owned and operated (i.e., vertical) retail properties to better control the experience and pricing.

**W**ith traditional brick-and-mortar retail down or flat across the U.S. and Western Europe, the sportswear category is in an all-out sprint to increase the percentage of business driven or derived online.

Robust user reviews, product customization, and loyalty programs have rewarded some brands with year-over-year e-commerce growth upward of 30 to 50 percent.<sup>1</sup>

Top players are beginning to beat their traditional retail partners at their own game. Nike, who runs away with the No. 1 spot in our inaugural Digital IQ Index®: Sportswear, trails only Foot Locker in U.S. online sales. While still a small percentage of overall sales, online and other direct-to-consumer sales will likely be many of the brands' primary growth channel.<sup>2</sup>

## **The Echo**

The value of high-budget TV campaigns and generous athlete endorsement contracts is increasingly recognized through extended engagement online. The Facebook communities and Twitter handles of athletes took center stage in the Olympics when participants were forbidden to promote the brands they endorse on social media. A primary factor in an athlete's endorsement contract is the size of his or her social media community and the frequency of communication. This is for good reason: our data indicates that athletes generate substantially more social media engagement when posting about brands than brands generate when posting about their endorsers.

1. [Select 10ks](#); Internet Retailer.

2. "Online Sporting Apparel Sales in the U.S.," IBIS World, March 2012.

## Plastic, Rubber, Cloth, Zeroes, and Ones

Few categories are better leveraging digital technologies to increase the perceived value of the product than sportswear. Innovative systems like Nike+ and miCoach from adidas are worth much more to the consumer than the \$149 pricetag on a Nike+ FuelBand or the \$70 pricetag on a miCoach CONNECT Heart Rate Monitor. The accompanying iPhone apps and online dashboards enhance loyalty and give brands access to new streams of consumer data.

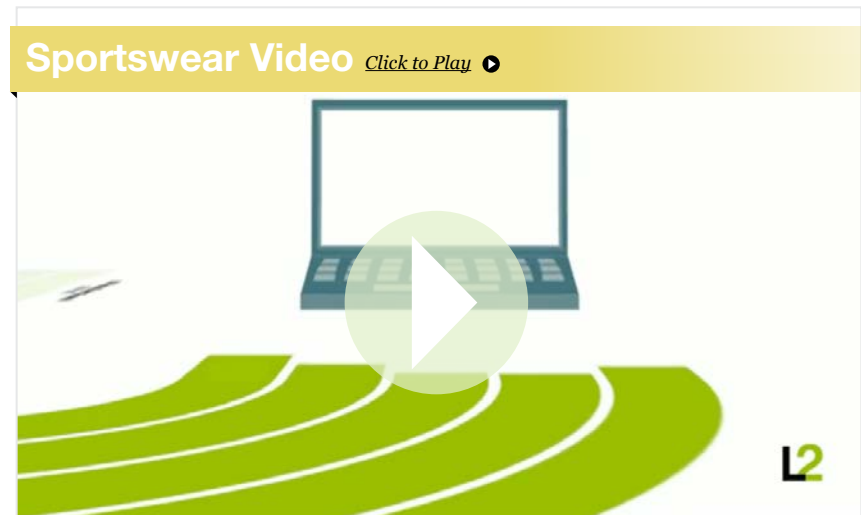

## Digital IQ = Shareholder Value

Our thesis is that digital competence is linked to shareholder value. This study attempts to quantify the digital competence of 42 sportswear brands. Our aim is to provide a robust tool to diagnose digital strengths and weaknesses and help brands achieve greater return on incremental investment. Similar to the medium we are assessing, our methodology is dynamic and we hope you will reach out to us with comments that improve our methodology, investigation, and findings. You can reach me at [scott@stern.nyu.edu](mailto:scott@stern.nyu.edu).

### Digital IQ Classes

#### Genius 140+

Digital competence is a point of competitive differentiation. Brands creatively engineer commerce and content for a variety of devices and online environments.

#### Gifted 110–139

Brands are experimenting and innovating across site, mobile, and social platforms. Digital presence supports brand image and larger marketing efforts.

#### Average 90–109

Digital presence is functional yet predictable. Uninspired efforts are often siloed across platforms.

#### Challenged 70–89

Limited or inconsistent adoption of mobile and social media platforms. Site lacks inspiration and utility.

#### Feeble <70

Investment does not match opportunity.

## KEY FINDINGS

### Site Features

Although 71 percent of brands allow product sharing via Facebook, only half allow sharing via email. Customer research suggests the latter is more commonly used.<sup>4</sup> More advanced Facebook Connect technology, which allows users to log on to a brand's site through Facebook, is employed by just four brands: New Balance, Nike, SKECHERS, and Speedo.

Although 42 percent of all shoppers suggest that they prefer to shop sites that have live chat<sup>5</sup> (the statistic significantly over-indexes among affluent males), only 29 percent of sportswear brands offer live chat on their sites. Almost three quarters of brands in sportswear incorporate conversion-enhancing user reviews, compared with just 56 percent of the brands in the 2012 Digital IQ Index®: Specialty Retail.

Just over a quarter of brands differentiate their sites from retail partners through product customization tools. These tools range in sophistication from NIKEiD (which enables users to customize a wide selection of Nike's products) to TYR's customization tool (which is limited to goggles). Sites with product customization tools registered 2.5 times higher monthly traffic and 21 percent annual traffic growth versus 13 percent for sites without these tools.<sup>6</sup>

Only 12 percent of brands have experimented with personalization software on site to customize content. One brand, Patagonia, uses Monetate software to provide site content to customers based on local weather and geography.<sup>7</sup>

## KEY FINDINGS

### Combating Amazon

Facebook is an important traffic driver to sportswear sites, contributing 10 percent of upstream traffic. Other sportswear retailers, such as rei.com or backcountry.com, account for almost 3 percent of upstream traffic.

Online retail giant amazon.com is playing an increasingly important role in the traffic ecosystem. Amazon is a top downstream site for three quarters of the brands, averaging 5 percent of all downstream traffic, reinforcing the notion that customers are comparing price on Amazon after selecting on the brand site.

Sportswear brands are attempting to mitigate the Amazon threat through offers, and 71 percent of brands provide free shipping to combat the compelling value proposition of Amazon Prime. Of these brands, 70 percent require an order minimum. The average minimum to qualify for free shipping is \$86. These offers are consistent with e-commerce best practices, as 55 percent of customers have abandoned a purchase after realizing the shipping charges were higher than expected.<sup>8</sup>

### Referral and Destination Traffic: Sportswear Sites Upstream and Downstream Traffic to and from the Following Sources

August 2012

## KEY FINDINGS

### Email: Missing the Basics

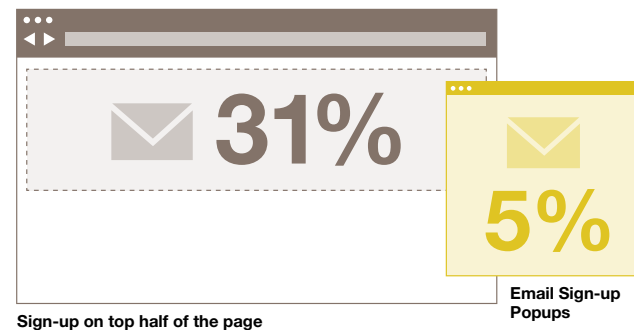

Sportswear brands have underinvested in basic email marketing tactics. Social media is more in vogue, but email still enjoys the highest conversion-rate (4.25 percent in the second quarter of 2012 versus 0.59 percent from social media).<sup>9</sup> Sportswear brands averaged just 0.9 emails per week in July and August, compared to the 2.7 emails per week sent by retailers in the 2012 Digital IQ Index®: Specialty Retail.

Email sign-up is also poorly optimized. Just 31 percent of the brands offer sign-up on the top half of the page, and only 5 percent are experimenting with sign-up pop-ups.

Less than half of the brands allow users to customize their preferences when they sign up, and only 19 percent send a personalized welcome email. Mizuno and adidas are experimenting with sending automatically triggered abandoned-cart emails, which can register conversion rates as high as 50 percent.<sup>10</sup>

### Email Feature Adoption % of Brands With the Following

10. "Email Marketing Benchmarks: Key Data, Trends and Metrics," eMarketer, August 2012.

## KEY FINDINGS

### Emerging Platforms

Sixty-nine percent of the brands have launched one or more Pinterest pages. As 80 percent of Pinterest users are women<sup>11</sup>, it follows that the platform would be less of a priority for some brands in the category. The exception is Quiksilver Europe, which has more than 400,000 followers.

The most popular boards on Quiksilver Europe are "Quiksilver Snow," "Quiksilver Skate" and "Best Videos."

11. "Pinterestly Enough: Interesting Pinterest Stats," David Wallace, Search Engine Journal, June 22, 2012.

## KEY FINDINGS

### Mobile: Brands Get the Message

Smartphones now account for nearly half of mobile phones in the U.S., and show no signs of slowing down<sup>13</sup>. The global m-commerce market grew to \$65.6 billion in 2011 and is forecasted to account for 24 percent of e-commerce revenues by the end of 2017<sup>14</sup>. All signs indicate mobile is becoming critical for brands focused on increasing direct-to-consumer sales. Seventy-four percent of sportswear brands in the Index have a mobile-optimized site, and all but two are m-commerce enabled.

Brands are active in both the iOS and Android app markets, however iOS investment dominates and in-app commerce is not the focus. Just 22 percent of apps are e-commerce enabled. iPad apps are less popular across the category; nearly half of iPad investment to date is in games or brand catalogs and magazines.
